

AWS Deployment Evidence

API Gateway Configuration:

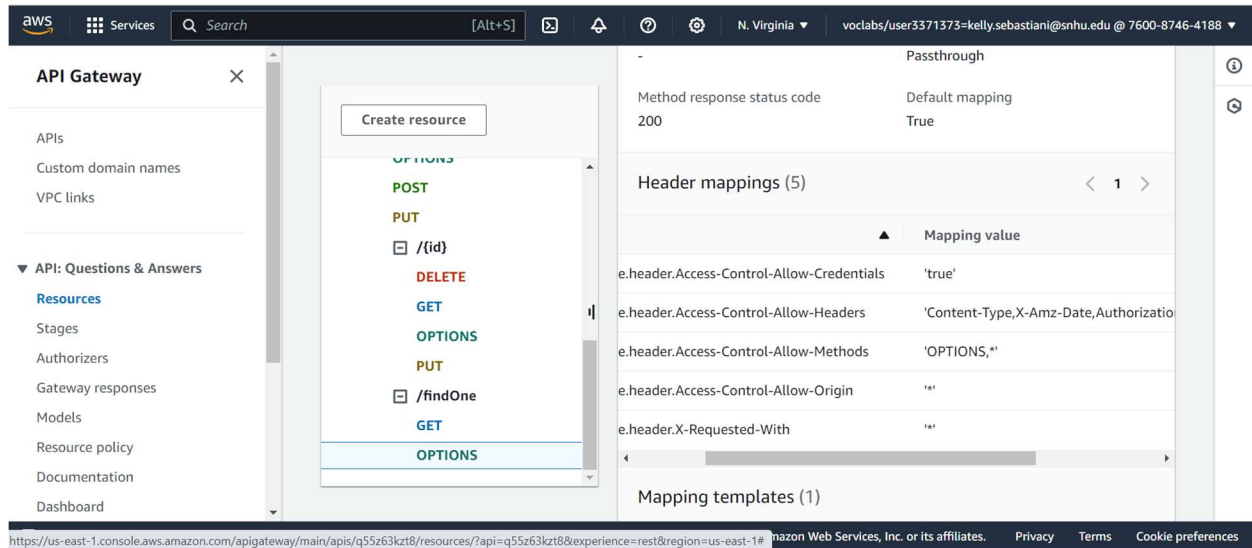

Part One

Part Two

CORS Configuration:

The screenshot shows the AWS API Gateway console interface. On the left, the 'API Gateway' sidebar is visible with options like 'APIs', 'Custom domain names', and 'VPC links'. The main panel displays the configuration for a specific API resource. The 'OPTIONS' method is selected, and the 'Header mappings' section is expanded, showing five mappings for CORS headers. The 'Mapping value' column contains the following values: 'true', 'Content-Type,X-Amz-Date,Authorization', 'OPTIONS,*', '*', and '*'.

Header	Mapping value
e.header.Access-Control-Allow-Credentials	'true'
e.header.Access-Control-Allow-Headers	'Content-Type,X-Amz-Date,Authorization'
e.header.Access-Control-Allow-Methods	'OPTIONS,*'
e.header.Access-Control-Allow-Origin	'*'
e.header.X-Requested-With	'*'

Deployment:

API URL: <https://q55z63kzt8.execute-api.us-east-1.amazonaws.com/api>

S3 URL: <http://kssnhu1.s3-website-us-east-1.amazonaws.com>

Angular Integration:

```
TS main.ts M X TS environment.prod.ts M
src > TS main.ts > ...
1  import 'hammerjs';
2  import { enableProdMode } from '@angular/core';
3  import { platformBrowserDynamic } from '@angular/platform-browser-dynamic';
4  import { LoopBackConfig } from '../sdk';
5
6  import { AppModule } from './app/app.module';
7  import { environment } from './environments/environment';
8
9  if (environment.production) {
10 |   enableProdMode();
11 | }
12
13 platformBrowserDynamic().bootstrapModule(AppModule)
14   .catch(err => console.error(err));
15
16 LoopBackConfig.setBaseUrl(environment.api_url);
17
18 LoopBackConfig.filterOnUrl();
19
```

```
TS main.ts M TS environment.prod.ts M X
src > environments > TS environment.prod.ts > [e] environment > 🔑 api_url
1  export const environment = {
2  |   production: true,
3  |   api_url: 'https://q55z63kzt8.execute-api.us-east-1.amazonaws.com'
4  | };
5
```

```
